Building Reports, Dashboards, and Custom Pages (UI Builder)

Insurance Claim Request Form

1. Aim

To build a supporting Report and a UI Builder Dashboard Page for the existing "Insurance Claim Request Form" application in Zoho Creator, allowing a claims officer to view, filter and triage submitted claims, and allowing new claims to be submitted from a single unified screen.

2. Procedure

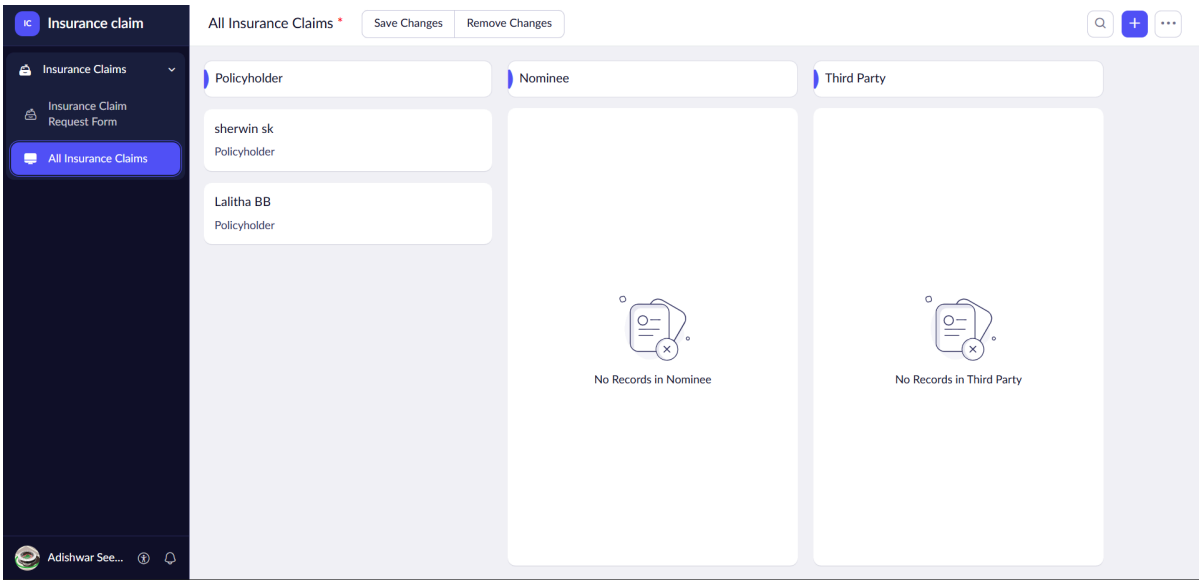

2.1 Building the Report

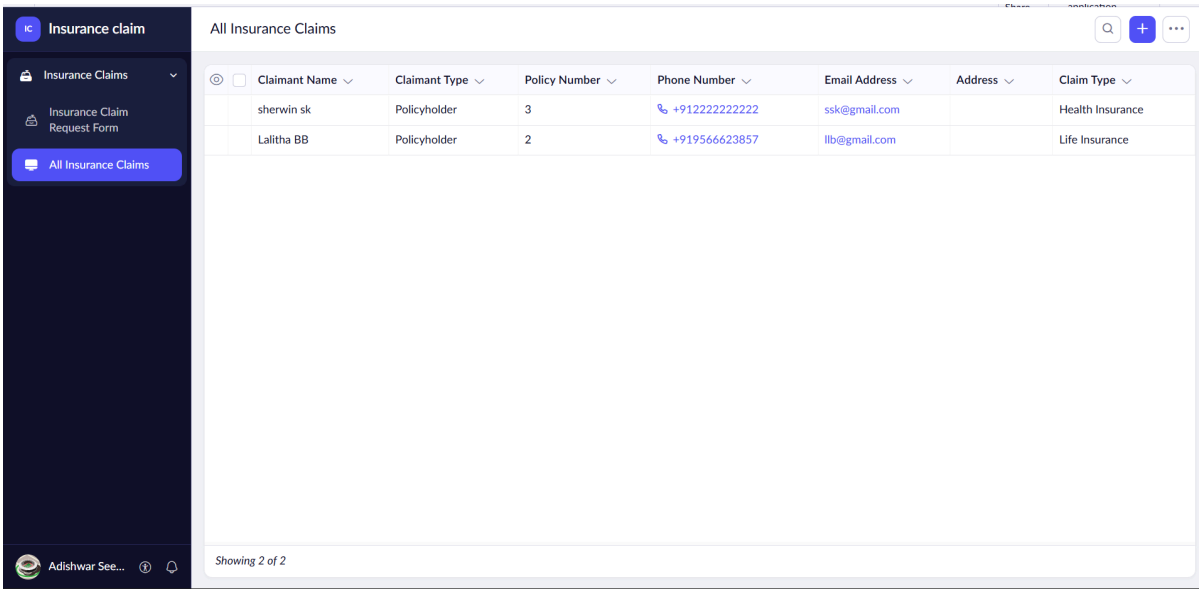

1. Open Reports in the left sidebar Zoho Creator auto-generates a grid report from the form. Rename it "All Claims Report."
2. On the report, click the Filter icon and add criteria for Claim Type and Date of Incident so staff can narrow down records interactively.
3. Group the report by claimant category Policyholder / Nominee / Third Party so records are organized by who filed the claim, making triage easier at a glance.

2.2 Building the Dashboard Page (UI Builder)

4. Go to Pages under UI Builder → click New Page choose Blank Page name it "Claims Dashboard."
5. Add a heading component titled "Branch Office - Claims Triage Dashboard."
6. Add a link/button to open the "All Claims Report."
7. Drag a Button Component and configure it: Text = "Submit new claim," Action = Open Form Insurance Claim Request Form.
8. Add a Chart Component plotting Policy Number against Date of Incident, to visualize claim volume trends over time.
9. Add a second Chart Component plotting Claim Amount Requested, grouped by location, to visualize the distribution of claim values.
10. Arrange the layout top to bottom: heading → report link → submit button trend chart claim amount chart.
11. Preview the page to confirm the report loads with filters applied, both charts render correctly, and the Submit button opens the form.
12. Check Form, Report, and Page permissions under Settings for each user role, ensuring the intended roles have View/Add access.
13. Publish the page and, if required, set "Claims Dashboard" as the default landing page under App Settings → Pages

3. Output

4. Result

A filterable "All Claims Report," grouped by claimant category, and a consolidated "Claims Dashboard" page with trend and claim-amount visualizations were successfully built using UI

Builder for the existing Insurance Claim Request Form application. This enables claims officers to view claim patterns at a glance and submit or review claims from a single unified screen, ensuring every claim is captured as a structured, routable digital record before assignment to a claims officer.
