# Insurance Claim Request & Processing Management

**Name**: ADISHWAR SEELAN SK
**Roll No**: 241401004
**Department**: CSBS
**Date**: 07-Oct-2026

## Experiment 6: Adding Workflows and Email Notifications using Deluge

### 1. Aim

To create a workflow in Zoho Creator using Deluge Script to send an automated confirmation email to the claimant upon successful submission of the "Insurance Claim Request Form".

### 2. Procedure

#### 2.1 Configuring the Workflow Trigger

1. Navigate to the workflows section in Zoho Creator and create a new workflow for the "Insurance Claim Request Form".
2. Set the workflow to run when a record is **Created**.
3. Choose to trigger the workflow on **Successful form submission**.
4. Name the workflow "Send Insurance Claim Confirmation Email".

#### 2.2 Writing the Deluge Script Action

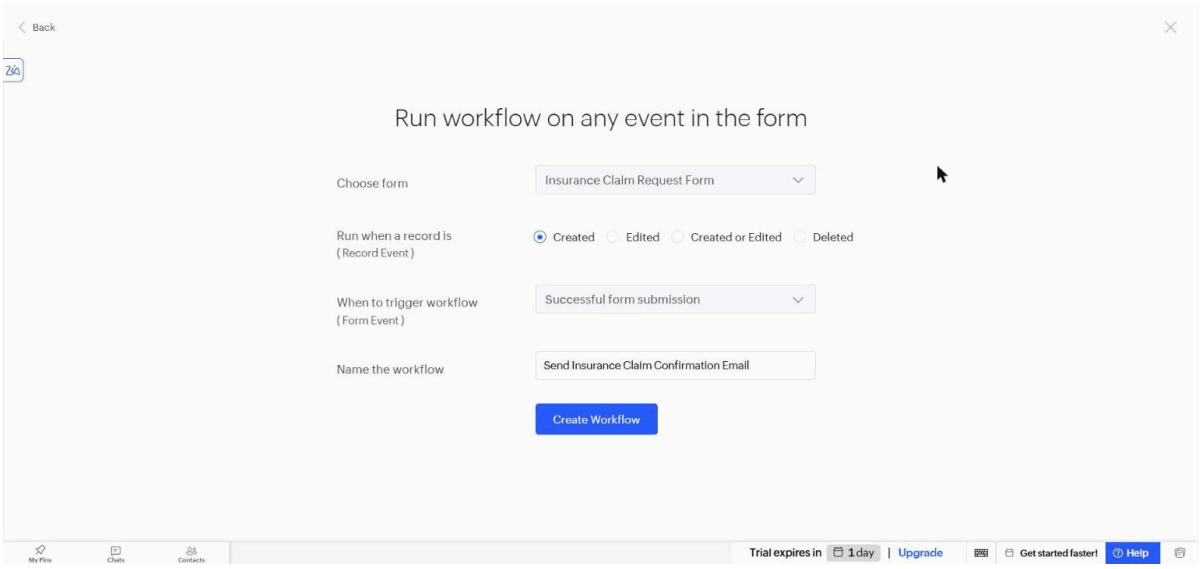

5. Choose **Deluge script** as the action type.
6. Write the script using the sendmail function:
    - Set 'from' to zoho.loginuserid.
    - Set 'to' to the user's email field (input.Email_Address).
    - Set 'subject' to "Insurance Claim Request Received".
    - Construct the 'message' using HTML tags and dynamic form inputs (e.g., input.Claimant_Name, input.Policy_number, input.Claim_type).
7. Troubleshoot any variable definition errors (e.g., correcting input.Email to input.Email_Address if a field error occurs).

8. Save the script and ensure the workflow is **Enabled** in the Form workflows dashboard.

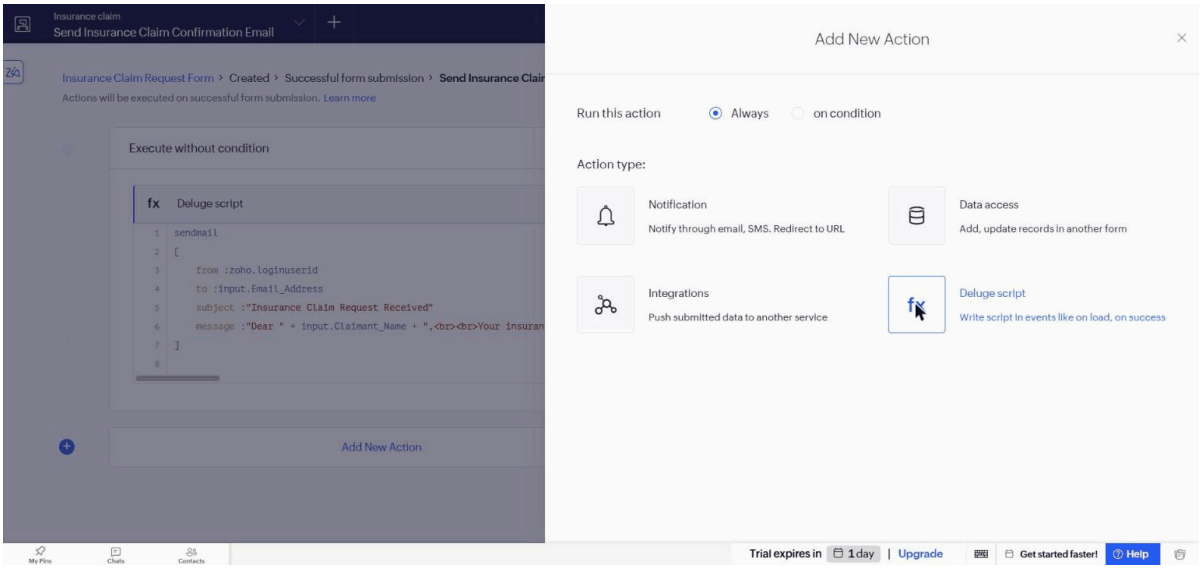

### 2.3 Testing the Workflow

9. Open the Insurance Claim Request Form and fill in test data (e.g., Claimant Name, Policy Number, Contact Details, Claim Details).
10. Submit the form and verify that the record is successfully added to the "All Insurance Claims" report.
11. Confirm that the automated email notification is triggered.

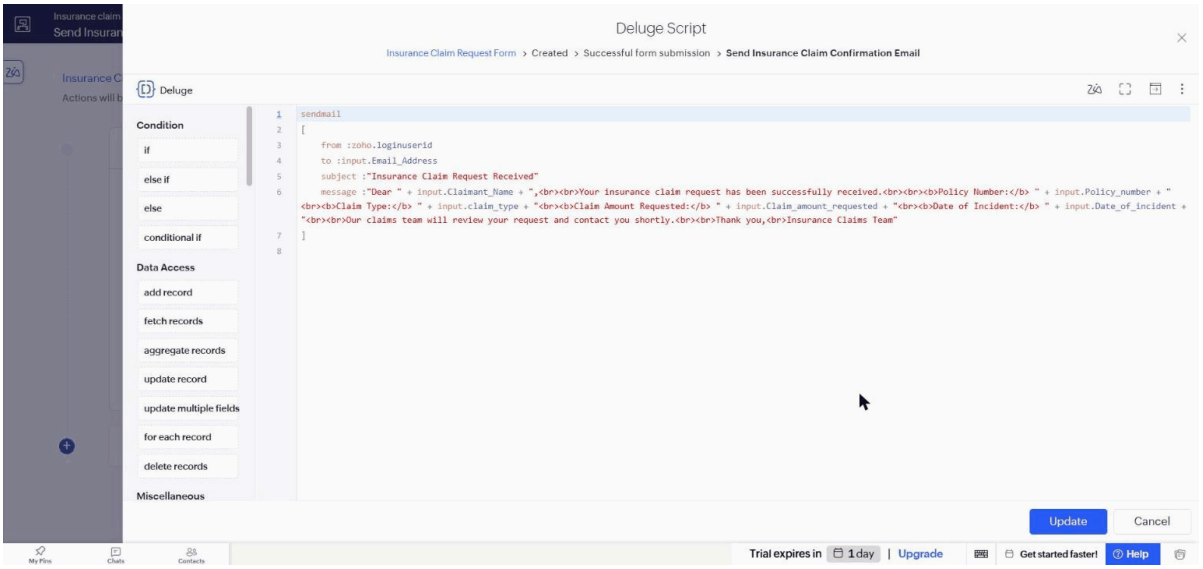

## 3. Output

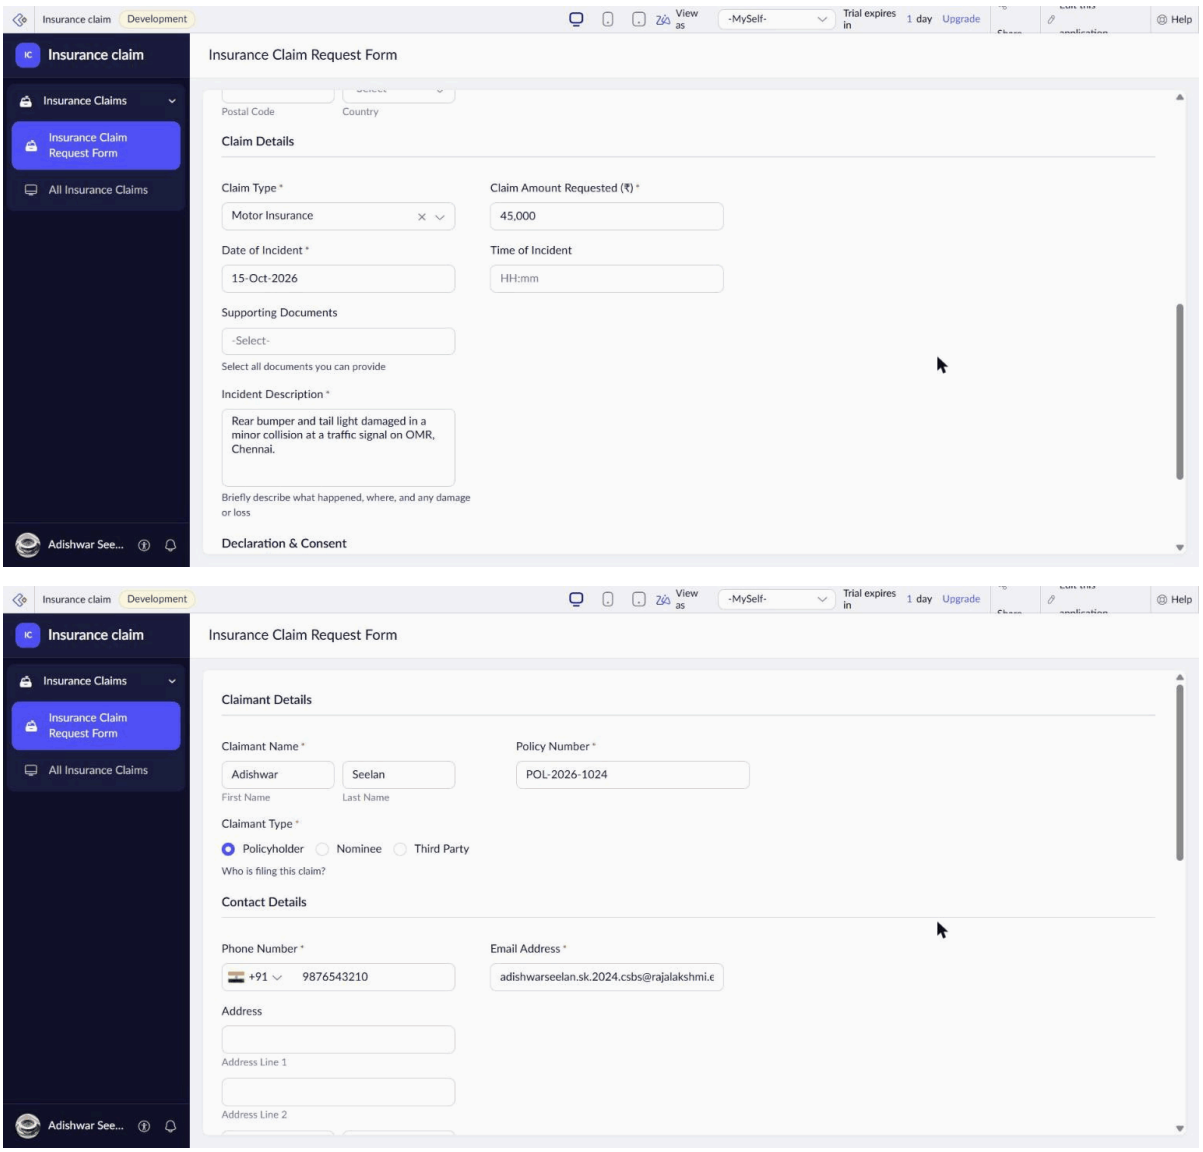

(Workflow Trigger Configuration)

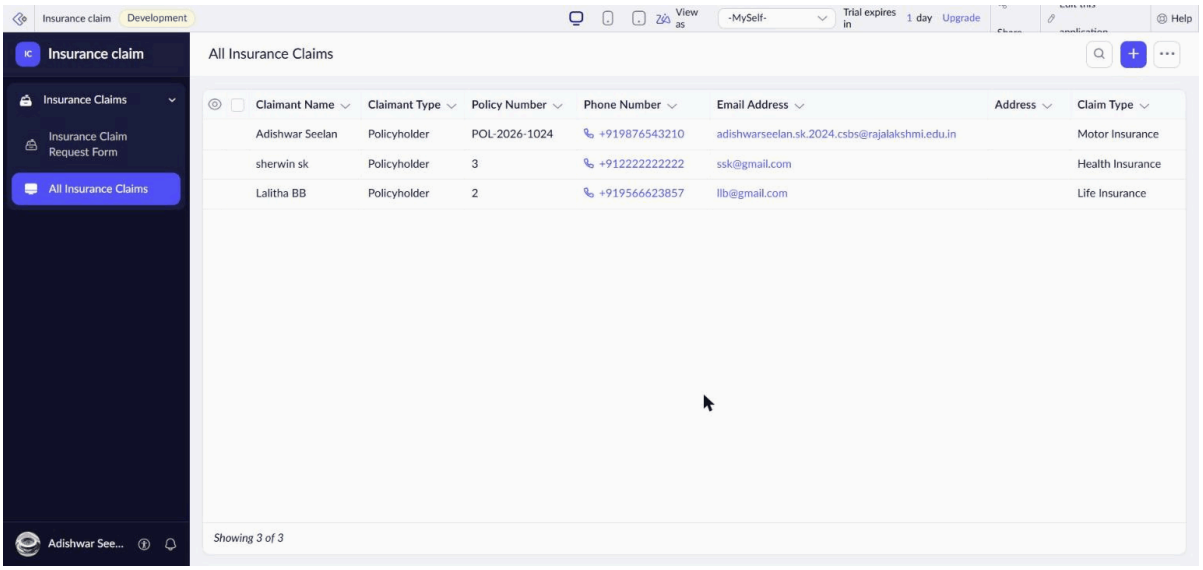

(Deluge Script Action Configuration)

(Form Workflows showing Enabled Status)

(Testing Form - Claimant and Claim Details)

(Verification of Record in All Insurance Claims Report)

## 4. Result

A workflow to send automated email confirmations was successfully implemented and tested using Deluge script. This ensures claimants receive immediate acknowledgement and a summary of their submitted claim details.
